

UAV Container

Integration of drones for Maritime, Land and Air domains

ACCESS™

Advanced Containerized Combat Effector and Sensor System

Bringing Multi-Domain Drone Operations Into One Deployable Platform.

The UAV Container is an operational hub designed to deploy, control, and sustain unmanned systems across Maritime, Land and Air domains from a single portable platform.

Shown: Housed in a robust 20ft container, the system integrates a climate-controlled operator station, mission electronics room, and dedicated launch area for UAVs and Counter-UAS interceptors. A weather-sealed roof opening enables fast and reliable launch capability while maintaining system protection under harsh environmental conditions.

Whether deployed at a military base, along a coastline, at sea, on critical infrastructure sites, or in support of expeditionary operations, the UAV Container delivers rapid deployment, operational flexibility, and multi-domain mission readiness.

One platform. Three domains. Unlimited operational possibilities.

Designed and equipped from requirements
